Started on Wednesday, 9 November 2022, 10:40 PM

State Finished

Completed on Wednesday, 9 November 2022, 10:47 PM

Time taken 6 mins 50 secs

Grade **1.50** out of 1.50 (**100%**)

Question 1

Correct

Mark 0.75 out of 0.75

Use the Miller-Rabin test to decide whether the number $n = 7121$ is prime or not. Check for 3 different bases only if necessary.

Important note: All answer boxes should be filled in using the convention that those not applicable must be filled in with x . All numbers must be filled in as positive numbers mod n .

Solution.

Decomposition:

$$s = 4 \quad t = 445 \quad t \text{ in binary} = 110111101$$

Iteration $k = 1$ for $a = 2$ (results mod n):

$$2^{(2^0)} = 2 \quad 2^{(2^1)} = 4 \quad 2^{(2^2)} = 16 \quad 2^{(2^3)} = 256 \quad 2^{(2^4)} = 1447$$

$$2^{(2^5)} = 235 \quad 2^{(2^6)} = 5378 \quad 2^{(2^7)} = 4503 \quad 2^{(2^8)} = 3522 \quad 2^{(2^9)} = x$$

$$2^t = 7120 \quad 2^{2t} = 1 \quad 2^{2^2t} = 1 \quad 2^{2^3t} = 1 \quad 2^{2^4t} = 1$$

Iteration $k = 2$ for $a = 3$ (results mod n):

$$3^t = 5222 \quad 3^{2t} = 2975 \quad 3^{2^2t} = 6343 \quad 3^{2^3t} = 7120 \quad 3^{2^4t} = 1$$

Iteration $k = 3$ for $a = 5$ (results mod n):

$$5^t = 4146 \quad 5^{2t} = 6343 \quad 5^{2^2t} = 7120 \quad 5^{2^3t} = 1 \quad 5^{2^4t} = 1$$

Conclusion:

n is prime (yes/no)= 

Question **2**

Correct

Mark 0.75 out of 0.75

Use the Miller-Rabin test to decide whether the number $n = 1521$ is prime or not. Check for 3 different bases only if necessary.

Important note: All answer boxes should be filled in using the convention that those not applicable must be filled in with x . All numbers must be filled in as positive numbers mod n .

Solution.

Decomposition:

$$s = \boxed{4} \checkmark \quad t = \boxed{95} \checkmark \quad t \text{ in binary} = \boxed{1011111} \checkmark$$

Iteration $k = 1$ for $a = 2$ (results mod n):

$$2^{(2^0)} = \boxed{2} \checkmark \quad 2^{(2^1)} = \boxed{4} \checkmark \quad 2^{(2^2)} = \boxed{16} \checkmark \quad 2^{(2^3)} = \boxed{256} \checkmark \quad 2^{(2^4)} = \boxed{133} \checkmark$$

$$2^{(2^5)} = \boxed{958} \checkmark \quad 2^{(2^6)} = \boxed{601} \checkmark \quad 2^{(2^7)} = \boxed{x} \checkmark \quad 2^{(2^8)} = \boxed{x} \checkmark \quad 2^{(2^9)} = \boxed{x} \checkmark$$

$$2^t = \boxed{410} \checkmark \quad 2^{2t} = \boxed{790} \checkmark \quad 2^{2^2t} = \boxed{490} \checkmark \quad 2^{2^3t} = \boxed{1303} \checkmark \quad 2^{2^4t} = \boxed{373} \checkmark$$

Iteration $k = 2$ for $a = 3$ (results mod n):

$$3^t = \boxed{x} \checkmark \quad 3^{2t} = \boxed{x} \checkmark \quad 3^{2^2t} = \boxed{x} \checkmark \quad 3^{2^3t} = \boxed{x} \checkmark \quad 3^{2^4t} = \boxed{x} \checkmark$$

Iteration $k = 3$ for $a = 5$ (results mod n):

$$5^t = \boxed{x} \checkmark \quad 5^{2t} = \boxed{x} \checkmark \quad 5^{2^2t} = \boxed{x} \checkmark \quad 5^{2^3t} = \boxed{x} \checkmark \quad 5^{2^4t} = \boxed{x} \checkmark$$

Conclusion:

n is prime (yes/no)= ✓
